Location: Kyiv region, Ukraine

Languages: Ukrainian, English

SUMMARY

GIS developer with six years building spatial systems end to end, across real estate data, EV charging analytics, agricultural robotics and oil services. Work spans large-scale spatial data pipelines, in-house tile infrastructure and full-stack web GIS applications, usually working directly with the client. Previously four years in survey engineering.

SKILLS

Programming: Python, JavaScript (TypeScript), SQL
GIS Libraries: Geopandas, Shapely, GDAL, Rasterio, Osmnx, OSRM, Valhalla, pgRouting, PostGIS
Databases: PostgreSQL, MySQL, DuckDB, BigQuery, Redis
Web Development: FastAPI, Flask, React, Vue, Leaflet.js, Mapbox GL, Cesium.js, Deck.gl
Tools & Platforms: QGIS, ArcGIS, Azure

EXPERIENCE

Freelance GIS Developer – JetSoftPro (Nov 2025 – Present)

- Extending the precision agriculture GIS system delivered under the original engagement, across the editor, processing pipelines and route planning.
- Integrating live GPS telemetry from the field machines into the mapping interface for real-time tracking.
- Building analytical heatmaps derived from drone sensor data.

GIS Developer – DXC Luxoft (Nov 2025 – Present)

- Designed, implemented and deployed an in-house tile server for large asset datasets in the energy sector.
- Built shared mapping tools used by other teams as the basis for their own products, spanning frontend components and backend services.
- Set requirements and technical direction directly with the client, including geoprocessing and infrastructure planning.

Full Stack GIS Developer – JetSoftPro (Jan 2025 – Nov 2025)

- Designed and built the complete GIS stack for the client: editor interface, processing pipelines, route planning and validation.
- Developed route planning and control for autonomous tractors operating between crop rows, including validation of field data prior to machine operation.
- Built a custom pipeline serving high-resolution imagery into the frontend, so end users could lay out machine tracks directly on it.

GIS Developer / Analyst – Zoniq (Nov 2023 – Nov 2024)

- Refined the existing site scoring models and developed new infrastructure and grid impact analysis, including its data pipeline.
- Developed an algorithm for charger placement planning at national market scale, optimized for profitability.
- Narrowed analysis areas to cut compute waste across the evaluation pipeline.

Back-end GIS Developer – Jito (Nov 2022 – Nov 2023)

- Optimized pipelines and spatial queries for a nationwide US property database of over 180 million properties carrying 60+ attributes each.
- Delivered data at scale to deep learning models extracting building and roof attributes from multi-year aerial imagery.
- Built the services handling high-volume geospatial processing, and the web application prototypes on top of them.

Full Stack GIS Developer – Upwork (Jul 2022 – Nov 2022)

- Scoped and estimated work directly with clients and selected the technology stack for each engagement.
- Developed serverless web GIS, routing services and desktop GIS applications.

- Integrated geospatial tooling into existing client platforms.

GIS Analyst / Developer – M4U Estate (Nov 2020 – Nov 2022)

- Built the spatial data pipelines covering Ukraine and the geodatabases underlying them.
- Developed network analysis tools and interactive maps used by the development and sales teams.
- Delivered the spatial analytics behind real estate development and sales decisions.

EDUCATION

National University of Life and Environmental Sciences of Ukraine [2018]

Master of Geodesy and Land Management
